

Garden Copper

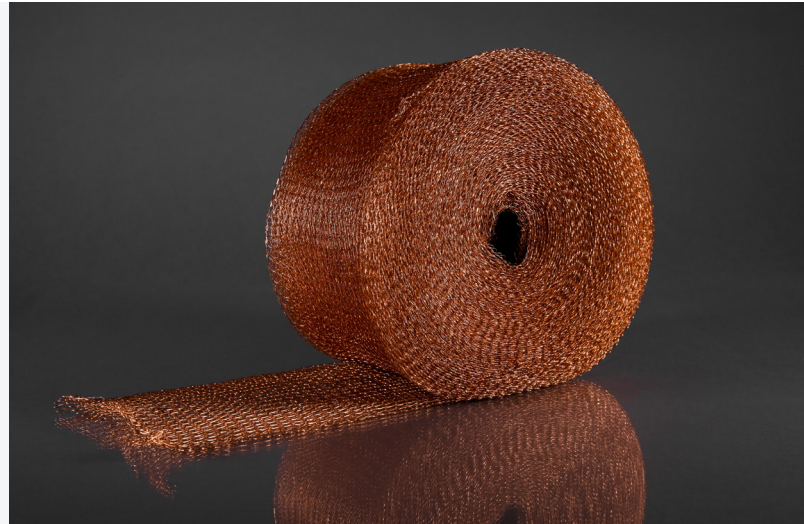

Excellent repellent and protection characteristics

Protecting People, Property and our Planet

Our KleenKnit™ Garden Copper provides a humane method of preventing slugs and snails from ruining the plants in your garden.

The natural electrical charge in the copper mesh repels unwanted gastropods, including snails and slugs, whilst being harmless to pets, birds and other wildlife.

Principles of Operation

KleenKnit™ Garden Copper prevents slugs and snails from destroying your ornamental plants and vegetables. These gastropods, and other ground dwelling creatures, can quickly decimate a hard-won vegetable patch, or prized flower bed that may comprise a wide range of plants. Seedlings and those plants with young or soft leaves are most vulnerable to attack by these pests.

On average there will be around 200 slugs living in a cubic metre of soil. This means that, in an average-sized garden, there may be around 15,000 slugs! Snails and slugs love the mild and damp weather typical in the UK, but will still be active in the winter if the temperature stays above 5°C (40°F).

Our robust copper mesh can be used almost anywhere such as general ground cover; underneath, on or inside pots and containers; and around plants, shrub stems and tree trunks for year-on-year protection.

Features & Benefits

- Repels slugs and snails without killing them
- Harmless to pets, birds and other wildlife
- Quick and easy to install
- More cost effective than alternative solutions
- Manufactured using state-of-the-art techniques
- Can be left in place for year-on-year protection
- Low cost and available ex-stock for immediate delivery

Quality Assurance

KnitMesh Technologies® is accredited to:
ISO 9001:2015, ISO 14001:2015, ISO 45001:2018,
PAS 99:2012 and IATF 16949:2016
